Fund:	455 Utilities		Sub-Fund:	300 W	astewater Management	_

Statement of Need

During the sizing evaluation of the existing unit, issues arose requiring the need to evaluate the use of 5 individual A/C units versus 1 central unit to handle the entire building. Consultants have been contacted and this project will fund the evaluation and specifications. Following the evaluation, funding will need to be identified for purchase of the Air Conditioning Unit(s).

Service Level

Reliability of equipment has direct influence on service levels and costs relating to repairs and downtime.

Issues

none

Project: 811700 Oxidation Pond Levee Improvements

Category: Origination Year: Planned Completion Year: Origin:	Capital 1993-94 Ongoing Staff	Type: Phase: % Complete:	Sanitary Sewer Ongoing n/a		Department: Project Manager: Project Coordinator: Interdependencies:	Public Works Hira Raina Dan Hammons none
Element: Sub-Element:	3 Environmental Management 3.3 Sanitary Sewer System		Goal: Neighborhood:	3.3C City Wi	de	
Fund:	455 Utilities		Sub-Fund:	300 W	astewater Management	

Statement of Need

This project was developed to complete modifications necessary to maintain the functionality of our secondary process, the Biological Ponds. Should we lose this ability we would not be able to process wastewater for the City of Sunnyvale. The needs were based on a 1987 Pond study completed by EOA Inc. and have incorporated a staged implementation of several improvements. Completed projects include the raising of the outer levee on Pond #1 and raising the West Main dyke on Pond #2.

The remaining funds will be used to complete plans and specifications to raise the inner levee and perform the evaluation of the transfer tubes. The two oxidation ponds are bounded by levees with inflow and outflow transfer tubes. The levees are founded on soft bay mud soils and must periodically be raised to maintain proper flood control elevations and provide safe roads for inspection or process monitoring. Also, the aging metal transfer tubes must be relined to maintain structural integrity and flow rates demanded by the treatment process. This evaluation will define the need to repair or replace the 18 transfer tubes along with the hydraulic effects of the proposed changes. The work includes the necessary surveying and mapping, geotechnical and civil engineering, permit assistance, engineering support along with cost estimates for raising the levee 1-2 feet and rehabilitating the transfer tubes.

Service Level

Maintain compliance with discharge regulations during future operation of the treatment plant.

Issues

Without proper maintenance we could lose the ability to treat our wastewater.

Project: 812750 WPCP Energy Improvements

Category: Origination Year: Planned Completion Year: Origin:	Capital 1987-88 2004-05 Staff	Type: Phase: % Complete:	Sanitary Sewer Construction 50		Department: Project Manager: Project Coordinator: Interdependencies:	Public Works Hira Raina John Addeo none
Element: Sub-Element:	3 Environmental Management 3.3 Sanitary Sewer System		Goal: Neighborhood:	3.3C City Wie	de	
Fund:	455 Utilities		Sub-Fund:	300 W	astewater Management	

Statement of Need

This project establishes Phase VII in this series of Energy Improvements. Improvements will be influenced by results and demands of the impact of both the Water Reuse Project and the Sludge Management Project. It will provide additional algae float thickening equipment so that 100% of the recoverable algae can be digested for the production of methane gas, and eliminate the recycled solids loading on the Pond System. Preliminary engineering design work has identified what is needed to complete this project.

Service Level

no service level effect

Project: 820860 Air Floatation Tank Gate Actuators

Category: Origination Year: Planned Completion Year: Origin:	Capital 1999-00 2003-04 Staff	Type: Phase: % Complete:	Sanitary Sewer Design 35		Department: Project Manager: Project Coordinator: Interdependencies:	Public Works Hira Raina Dan Hammons none
Element: Sub-Element:	3 Environmental Management 3.3 Sanitary Sewer System		Goal: Neighborhood:	3.3C City Wie	de	
Fund:	385 Capital Projects		Sub-Fund:	200 Se	wer Fund Assets	

Statement of Need

This project is needed as a cost avoidance and reliability feature for recycled water production. Production will require air floatation to be taken out and put into service several times a day.

Reliable and timely operation of aft gates will optimize water production actuators for five gates needed. Construction is planned to be completed in FY 2002/03. Bids are due in December 2002.

Service Level

Air Floatation Tank Gate Actuators

Project: 821320 Back-up Power for Sewage Lift Stations

Category: Origination Year: Planned Completion Year: Origin:	Capital 1999-00 2003-04 Staff	Type: Phase: % Complete:	Sanitary Sewer Construction 85		Department: Project Manager: Project Coordinator: Interdependencies:	Public Works Hira Raina Jim Craig none
Element: Sub-Element:	3 Environmental Management 3.3 Sanitary Sewer System		Goal: Neighborhood:	3.3F City Wi	de	
Fund:	385 Capital Projects		Sub-Fund:	200 Se	wer Fund Assets	

Statement of Need

The existing Lawrence and Arques sewage lift stations cannot operate during power failures. Extended power outages can result in sanitary sewage spills from the sewer system. Such spills are violations of the Water Pollution Control Plant (WPCP) National Pollution Discharge Elimination System (NPDES) permit. Installation of a back-up power supply for use at each station will reduce the potential for discharge permit violations and potential fines by the Regional Water Quality Control Board.

Service Level

no service level effect

Issues

The contractor is working on obtaining Air Quality Board permit.

Project: 821900 Conway Road Improvement Project

Category: Origination Year: Planned Completion Year: Origin:	Capital 2000-01 2003-04 Staff	Type: Phase: % Complete:	Sanitary Sewer Construction 60		Department: Project Manager: Project Coordinator: Interdependencies:	Public Works Hira Raina none none
Element: Sub-Element:	2 Community Development 2.3 Housing and Community Revita	lization	Goal: Neighborhood:	2.3B De Anza	ı	
Fund:	385 Capital Projects		Sub-Fund:	100 Ge	eneral Fund Assets	_

Statement of Need

The Conway Road Improvement project will result in the construction of private roadway improvements with a public access easement, the undergrounding of existing overhead utilities, and the construction of public water, sewer, and storm drainage facilities affecting twelve private lots.

This project will complete roadway and utility improvements in an unimproved area off of Hollenback Avenue near Fremont Avenue. The work is being funded with the formation of an assessment district to be paid for by the property owners. The City has agreed to pay for a new sewer main to allow for the elimination of septic tanks in the area. The project is under construction and near completion.

Service Level

The improvements will provide safer vehicular access, increased water flows for fire suppression purposes, and standard sanitary sewer services.

Issues

Due to inadequate access and water availability, the Community Development Department will not issue building permits except for simple maintenance or repairs to the owners of the twelve private lots.

Financial Data	Prior Years Actual	Revised Budget 2003-04	2004-05	2005-06	2006-07	2007-08	2008-09	2009-10	2010-11	2011-12	2012-13	2013-14	10 Year Budget	Grand Total

Project: 822620 Auto Sodium Bisulfite System for Recycled Water Delivery

Category: Origination Year: Planned Completion Year: Origin:	Capital 2001-02 2003-04 Staff	Type: Phase: % Complete:	Sanitary Sewer Design 15		Department: Project Manager: Project Coordinator: Interdependencies:	Public Works Hira Raina John Addeo none
Element: Sub-Element:	3 Environmental Management 3.3 Sanitary Sewer System		Goal: Neighborhood:	3.3C City Wi	de	
Fund:	385 Capital Projects		Sub-Fund:	200 Se	wer Fund Assets	

Statement of Need

Dechlorination of delivered water is needed. This project was an alternate bid item when the Tertiary Improvement project was constructed but funds were not available at that time. The project is needed to provide customer reliability of the product delivered. Project design began in FY 2002-03. 100% design complete.

Service Level

Service Delivery Plan 34206 - By-Product Reuse, requires that our focus is on: "Producing recycled water that meets the quality and quantity demands of the water supply and distribution system." Unless we dechlorinate the delivered product our customers would be adversely impacted.

Issues

Production of recycled water requires that a high (over 5ppm) chlorine residual is maintained. Delivery of this high chlorine level is harmful to all our irrigation customers, so we manually feed sodium bisulfate to dechlorinate delivered water. This current manual method is costly and unreliable, as it is impossible to manually feed efficiently with the great variation of demand. Installation of an automation feed system is required.

Project: 824300 Replacement of Digester Lids

Category: Origination Year: Planned Completion Year: Origin:	Capital 2002-03 Ongoing Staff	Type: Phase: % Complete:	Sanitary Sewer Planning 0		Department: Project Manager: Project Coordinator: Interdependencies:	Public Works Hira Raina Dan Hammons none
Element: Sub-Element:	3 Environmental Management 3.3 Sanitary Sewer System		Goal: Neighborhood:	3.3c City Wi	de	
Fund:	455 Utilities		Sub-Fund:	300 W	astewater Management	

Statement of Need

This project would provide funds to replace four digester covers built in 1961. The first three are the same size and the fourth lid is larger. We are now experiencing leaks into the inside of these covers. While we can make some patches, they are now past their expected life.

Service Level

No service level effect unless failure occurred. This is infrastructure maintenance.

Issues

Failure of these covers would result in the release of gas into the atmosphere and fines would be incurred.

Project Financial Summary

Replacement of Digester Lids 824300

Project: 824320 Toeberm for Biosolids Monofill

Category: Origination Year: Planned Completion Year: Origin:	Capital 2003-04 2003-04 Staff	Type: Phase: % Complete:	Sanitary Sewer Design 10		Department: Project Manager: Project Coordinator: Interdependencies:	Public Works Mark Bowers Gail Bentley none	
Element: Sub-Element:	3 Environmental Management 3.3 Sanitary Sewer System		Goal: Neighborhood:	3.2H City Wi	de		
Fund:	455 Utilities	Sub-Fund:	200 So	200 Solid Waste Management			

Statement of Need

The Toe Berm has been identified as a necessary precursor to the safe use of the Biosolids Monofill area. Disposal of high moisture content wastes is anticipated to occur in the Monofill area. Due to the topography of the area, and the proximity of Caribbean Drive, it has been deemed necessary to construct a berm at the southern end of the Monofill to ensure waste stability. This will allow the safe use of the Biosolids Monofill.

Service Level

None

Issues

There is concern that use of the Monofill without the construction of the toe berm could, in the event of a sufficient seismic event, result in rapid movement of the materials disposed of in the Monofill into Caribbean Drive.
